

Grade 4 Science Worksheet 1: Water Cycle and Its Importance (Difficulty Level: Advanced)

Name: _____

Date: _____

Question 1: Why does the temperature of water need to increase for evaporation to occur?

- a) To make the water molecules lose energy
 - b) To make the water molecules move faster and escape as vapor
 - c) To turn water into ice first
 - d) To make the water molecules form droplets
-

Question 2: How does humidity affect evaporation?

- a) Higher humidity speeds up evaporation.
 - b) Higher humidity slows down evaporation.
 - c) Humidity does not affect evaporation.
 - d) Humidity turns water into ice.
-

Question 3: Why is condensation important for cloud formation?

- a) It changes water into vapor that forms clouds.
 - b) It turns water vapor into tiny droplets that gather to form clouds.
 - c) It increases the heat in the atmosphere.
 - d) It removes water from the air.
-

Question 4: Which of the following best explains how dew forms on grass in the morning?

- a) Water from the soil moves to the surface of the grass.
- b) Water vapor in the air condenses on the cold grass.

- c) Rain falls on the grass overnight.
 - d) Water freezes and melts on the grass.
-

Question 5: Why do clouds form at higher altitudes?

- a) Water vapor cools down and condenses into droplets due to lower temperatures.
 - b) The wind pushes water droplets higher.
 - c) Water vapor heats up at higher altitudes.
 - d) Clouds are formed only by the ocean's heat.
-

Bonus Question:

What happens to water vapor when it cools rapidly?

- a) It becomes ice directly.
- b) It condenses into liquid water.
- c) It turns back into gas.
- d) It disappears.
