

Grade 4 Science Worksheet 1: Water Cycle and Its Importance (Difficulty Level: Easy)

Name: _____

Date: _____

Question 1: What is evaporation?

- a) Water turning into ice
 - b) Water changing into gas or vapor
 - c) Water falling as rain
 - d) Water flowing in a river
-

Question 2: What causes evaporation to happen?

- a) Cold weather
 - b) Heat from the sun
 - c) Water freezing
 - d) Clouds forming
-

Question 3: What is condensation?

- a) Water vapor turning back into liquid
 - b) Water changing into gas
 - c) Rain falling to the ground
 - d) Ice melting into water
-

Question 4: Where can we see condensation in our daily life?

- a) Water boiling
 - b) Steam forming water droplets on a cold glass
 - c) Water flowing in a river
 - d) Ice cubes in a freezer
-

Question 5: What happens when water vapor in the air cools down?

- a) It turns into ice.
 - b) It forms liquid droplets.
 - c) It turns into steam.
 - d) It disappears.
-

Bonus Question:

What do we call the tiny droplets of water that form clouds?

- a) Rain
 - b) Ice
 - c) Water vapor
 - d) Condensation droplets
-
-
