

Worksheet 2:

True or False

Instructions: Read the statements carefully. Write True if the statement is correct and False if it is not.

1. The life cycle of a butterfly begins with a chrysalis.
2. Plants grow from seeds into adult plants that produce more seeds.
3. In the human life cycle, a child comes after a baby.
4. Caterpillars eat leaves to grow before becoming butterflies.
5. Germination is the process where an adult butterfly lays eggs.
6. A seedling is a fully grown adult plant.
7. Humans do not have a life cycle like other organisms.
8. The haplontic life cycle is found in butterflies.
9. A butterfly's chrysalis is also called a pupa.
10. The human life cycle has four main stages: baby, child, adult, and old age.

Bonus Question:

- Draw your favorite life cycle and write two sentences about it!

This worksheet encourages understanding while reinforcing learning. Let me know if you'd like any modifications! 😊
