Class 10 Mathematics – Pair of Linear Equations Worksheet (Advanced 2)

Name: _____

Date: _____

1. Solve: $3x+4y=10$ and $2x-2y=2$ using elimination and substitution.
2. Solve: $x+y=14$ and $x-y=4$ using two methods.
3. Compare graphical and algebraic methods.
4. Write a real-life example of pair of linear equations.
5. Explain dependent equations with example.
6. Explain inconsistent equations with example.
