

Class 10 Mathematics - Pair of Linear Equations in Two Variables

Name: _____

Date: _____

Easy Worksheet 1

Questions

1. What is a pair of linear equations in two variables?
2. How many variables are present in the equation $2x + 3y = 7$?
3. What is the general form of a linear equation in two variables?
4. What is the graph of a linear equation in two variables?
5. Name the variables in $x + y = 5$.
6. Is $2x^2 + y = 5$ a linear equation?

Answer Key

1. Two linear equations involving the same two variables.
2. Two
3. $ax + by + c = 0$
4. A straight line.
5. x and y
6. No
